# CANOSSIAN CALENDAR
INSTALLATION AND OVERVIEW

1. System requirements
2. How to download the apk
3. Installation
4. Overview

1. System requirements

Canossian Calendar is an application for smartphones and tablets with the Android operating system (development and tests have been performed on version 7.0 Easter Egg) is therefore not compatible with IOS systems (Iphone) and Windows Phone.
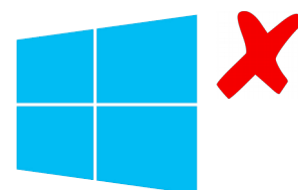

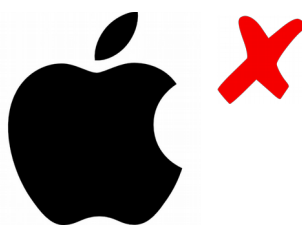

2. How to download the apk

The software that can be installed on smartphones and tablets with the Android operating system is provided in installation packages or apk (Android Package Kit): these packages can be published on Google Play Store or on other channels such as social networks or company websites, etc.
If a package is not published on Google Play Store, the installation procedure is slightly different because, for security reasons, an additional confirmation is required (see point 3).

The packages corresponding to the different versions of the Canossian Calendar can be downloaded at the following web address: http://www.canossian.org, the versions available today (8/9/2018) are the one in Italian, the one in English and the one in Spanish shortly French and Portuguese versions will also be available.
You can either download the package using the smartphone or tablet on which you want to install the app (recommended) or using a PC connected to the Internet (but in this case you need to copy the apk package on the smarphone or tablet to proceed with the installation).
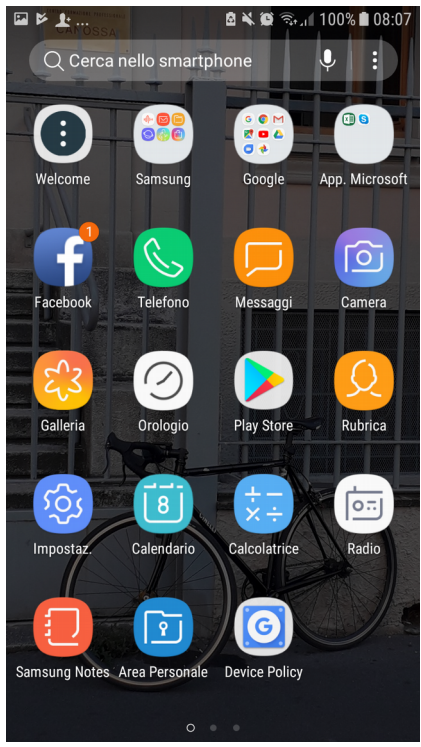

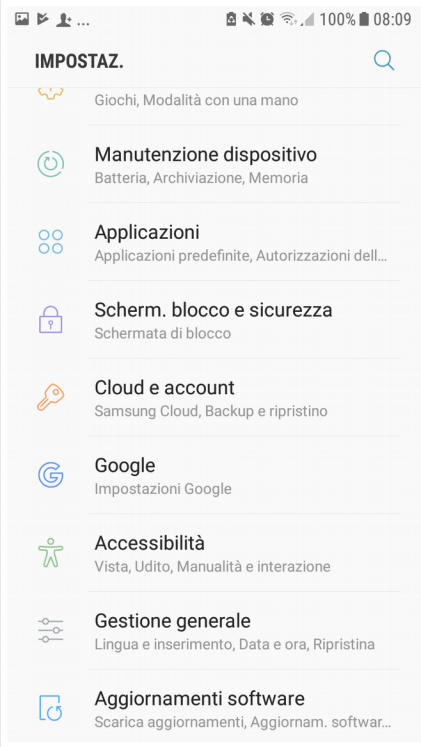

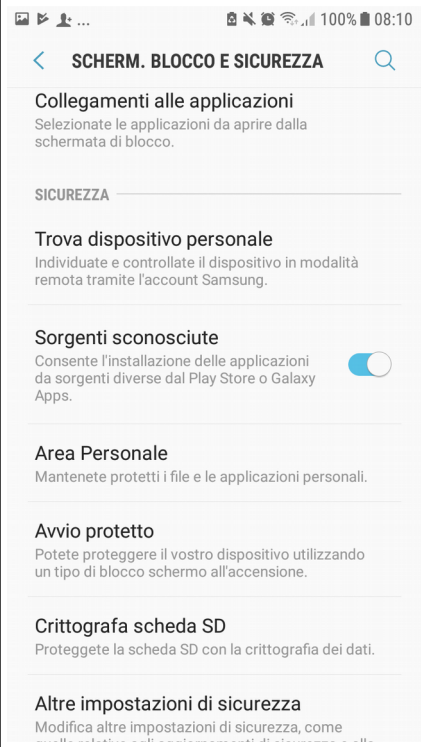

3. Installation

Once the apk package has been downloaded (or copied) to the smartphone or tablet, it is installed in this way

3.1 Security settings
As already mentioned above if a package is not installed through Google Play Store, the system could prevent the installation, this is due to the fact that, when an apk package is published on Google Play Store, the content is checked to prevent it from damaging the device on which it is installed.
In some cases, depending on the version of Android, the system, as soon as it detects that you are trying to install a package from external source, asks directly to the user if he wants to install this package: just a simple confirmation and installation can proceed .
If, on the other hand, the system blocks the installation without giving any further choice, it is advisable to set the smartphone or tablet to also install the apk packages coming from external sources by following these steps

| Access the Device Settings | Access the security section | Activate the entry "Unknown sources" |

At this point it is possible to proceed with the installation.
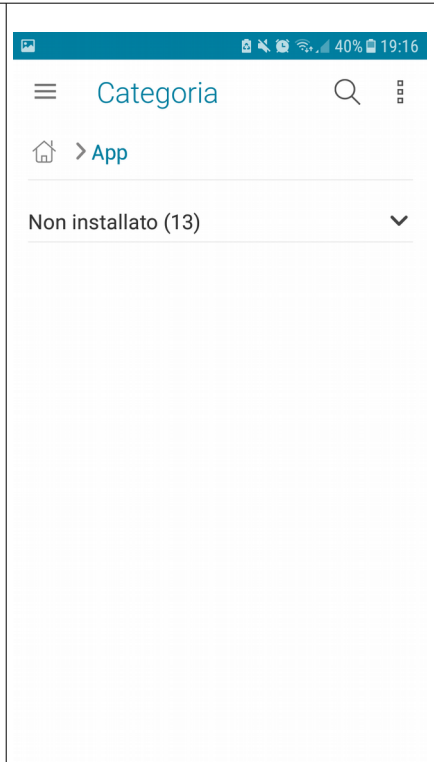

3.2 Locate the package

Start the Files Manager app (or Archive) and locate the location of the apk file: in some cases these files are indicated with the item "Apps not installed" (see the screens below taken from a Samsung smartphone), you can also run a search by setting the name of the app in the search box
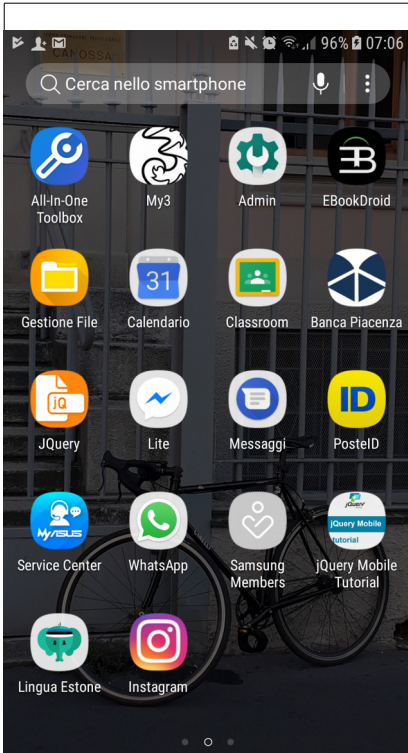

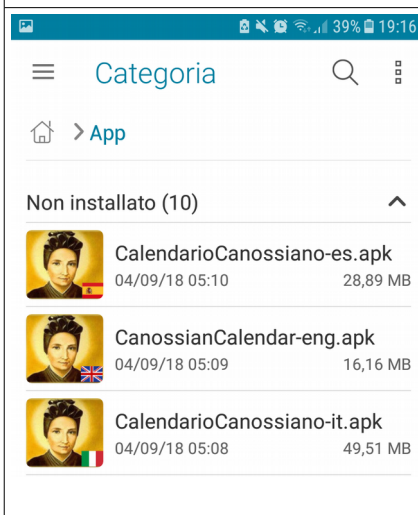

|		
Start the file manager	Open the App category	Expand the list of apps shown as not installed
	In the image on the left you can see the apk related to the three versions of the Canossian Calendar, at this point the installation can be done simply by touching the icon corresponding to the package apk that you intend to install.	
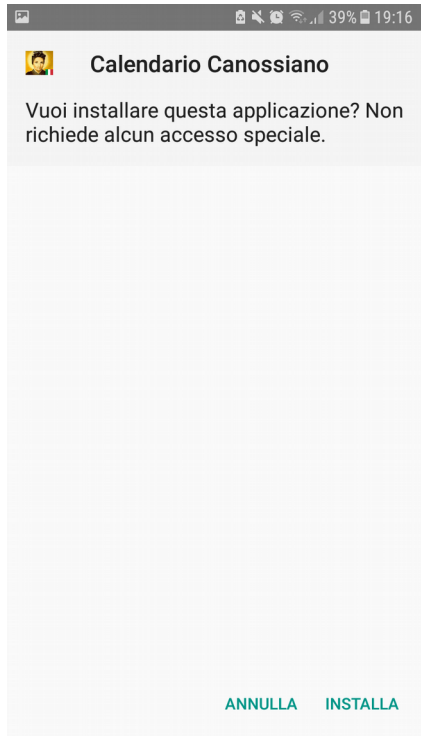

3.3 Installation

The installation is very simple, the app does not require any special access, which means that it does not use the Internet connection via WiFi or data connection and access to data and apps already on the device.

		Once the app is installed it can be found in the application list of your phone
Confirm with Install	Choose the Open command to start the app or Finish if you do not intend to use it immediately	

4. OVERVIEW

The Canossian Calendar app consists of 4 screens navigable through the 4 buttons that are always in the foreground at the bottom of the screen, the active screen is indicated by a black bar below the reference icon.

4.1 Home

It contains a brief description of the Institute of Canossian Daughters of Charity, the only "movement" possible is the scroll down to read the proposed text
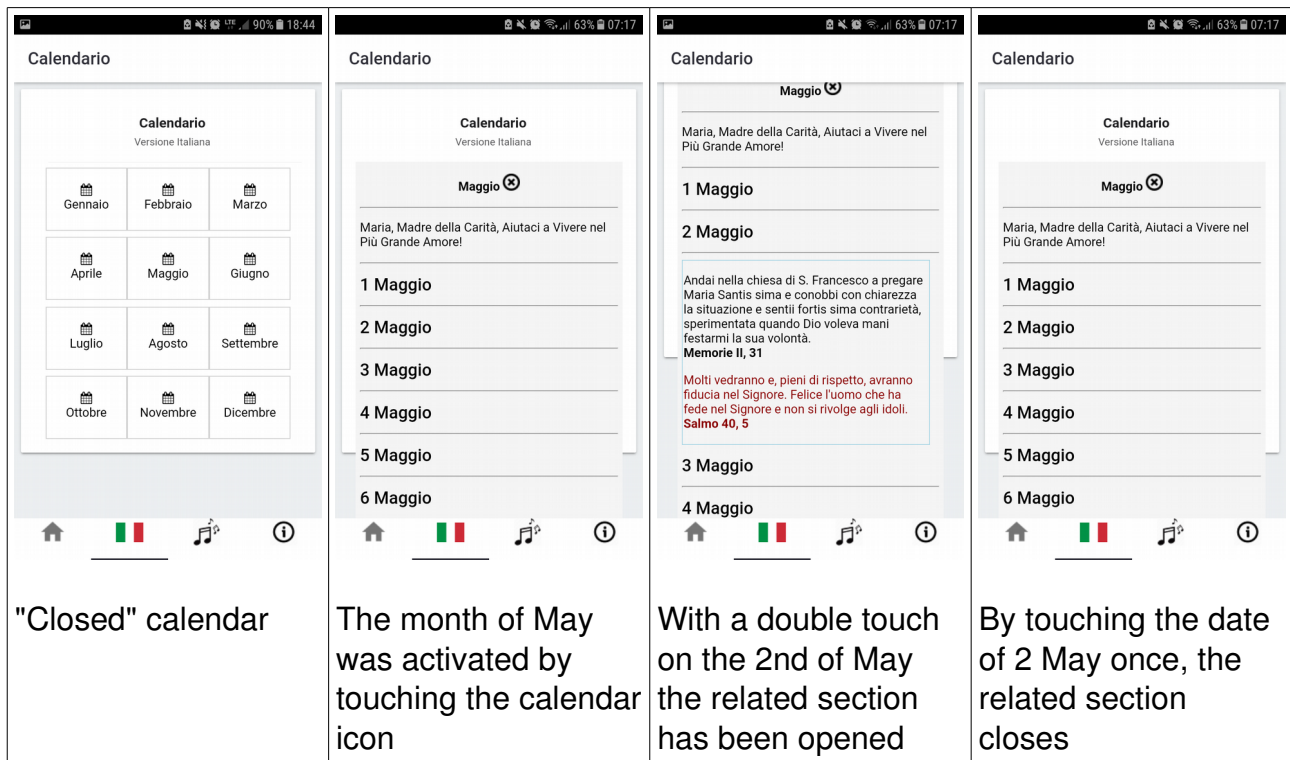

4.2 Calendar

Accessible via the national flag icon,

The use is very simple: touching the name of the month or the calendar icon opens a menu with the days of the selected month, a double touch on a specific day opens the section relating to that day containing a passage of the writings of S. Magdelene combined with a passage from the Holy Scriptures.

To close the section related to that day just touch the date, to close the menu of the month just touch the name of the month previously opened.

"Closed" calendar	The month of May was activated by touching the calendar icon	With a double touch on the 2nd of May the related section has been opened	By touching the date of 2 May once, the related section closes

NOTE: for a more comfortable reading it is advisable to use the smartphone horizontally
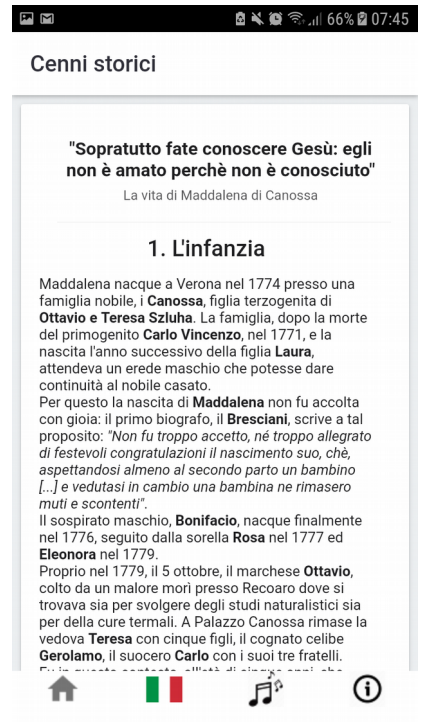

4.3 Music

The music section contains songs that can be started, paused or stopped by touching the related buttons.
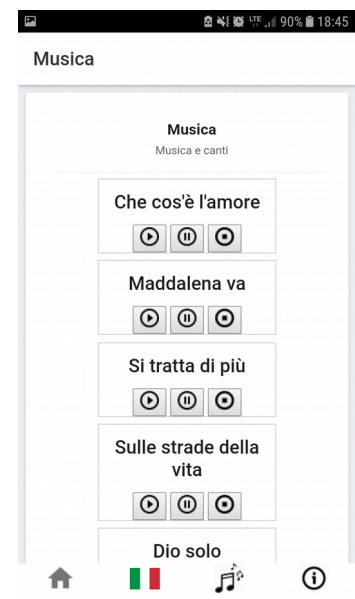

4.4 Historical background

The last section contains a summary of the life of S. Magdelene, you can scroll down the screen to read its contents.
